Leukemia Diagnostic Panel by Flowcytometry

ID. No	: D2470493	Received date : 21 Oct 2026	Printed date: 25 Oct 2026 06:41PM
Patient Name	: ARAF		Age : 19 y(s)
Exam	: Immunopheno. for acute Leukemia P.B.		Sex: Male
Ref. By	: ASSOC. PROF. DR. HUMAYRA NAZNEEN, MBBS (DMC), FCPS (Haematology)		

Instrument Software	: BD FACSLyric /BD FACSuite
Cell Preparation Method	: Stain-Lyses-Wash
Gating Strategy	: CD45 vs SSC
Event acquired	: 29,700
Percent cell gated	: 95.0 %

Peripheral blood specimen provided reveals distinct cell cluster in the blast region of about 75% of the total population. Further analysis of these critical cells in the blast region expresses the following immunophenotypic properties-

Lymphoid markers	Percent (%)	Intensity	Interpretations
cyCD3	05.60	-	Negative
smCD3	02.00	-	Negative
CD2	01.60	-	Negative
CD4	04.90	-	Negative
CD5	01.90	-	Negative
CD7	**82.00**	**Bright**	**Positive**
CD19	01.90	-	Negative
CD79a	00.90	-	Negative
Myelomonocytic Markers			
CD11c	01.00	-	Negative
CD13	**78.00**	**Moderate**	**Positive**
CD14	01.80	-	Negative
CD15	02.00	-	Negative
CD33	**97.00**	**Bright**	**Positive**
CD36	02.60	-	Negative
CD64	**27.00**	**Dim**	**Positive**
CD71	**88.00**	**Bright**	**Positive**
CD117	**70.00**	**Moderate**	**Positive**
Anti-MPO	**47.00**	**Dim**	**Positive**

Leukemia Diagnostic Panel by Flowcytometry

ID. No	: D2470493	Received date : 21 Oct 2026	Printed date: 25 Oct 2026 06:41PM
Patient Name	: ARAF		Age : 19 y(s)
Exam	: Immunopheno. for acute Leukemia P.B.		Sex: Male
Ref. By	: ASSOC. PROF. DR. HUMAYRA NAZNEEN. MBBS (DMC), FCPS (Haematology)		

Other Markers	Percent (%)	Intensity	Interpretations
CD45	90.00	Dim	Positive
HLA-DR	95.00	Bright	Positive
Anti-TdT	04.90	-	Negative
CD34	79.00	Bright	Positive
CD56	04.90	-	Negative

FINDING

Using SSC vs CD45 gating strategy 75% cells are gated in blast window which are positive for myeloid markers Anti-MPO, CD13, CD33, CD117, CD64 positive for primitive marker HLA-DR and CD34. Among other positive markers there are CD11c, CD15, CD38, CD56, CD71, CD123, CD58 and T cell lineage marker CD7. Other T cell lineage Marker and B cell lineage markers are negative in the gated population.

IMPRESSION

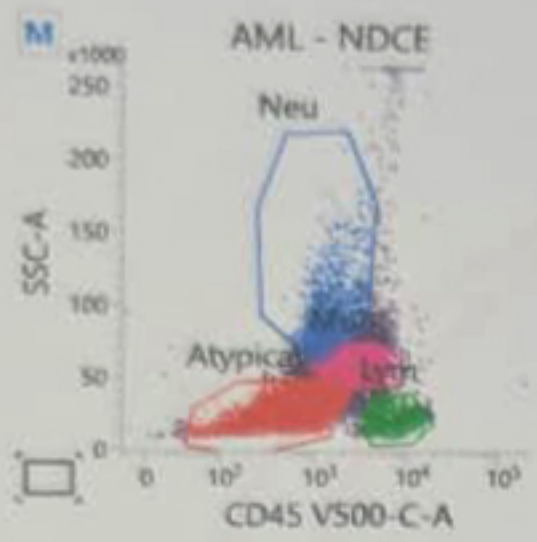

The overall immunophenotypic findings are suggestive of ***Acute Myeloblastic Leukemia (AML) with aberrant expression of CD7.*** Correlation with clinical features, bone marrow morphology and cytogenetic and molecular study is recommended.

CROSS MATCHING

Parameters	Test Result
Patient :	
Blood Group (ABO)	"B" Rh(D) Positive
Donor :	
ID NO :	E1246308
Name :	AHSAN
Blood Group (ABO)	"B" Rh(D) Positive
Syphilis (ICT)	Negative
HBs Ag (ICT)	Negative
Anti HCV (ICT)	Negative
HIV (1&2) (ICT)	Negative
Malaria (ICT)	Negative
Result of Cross-matching:	
at Room temperature	Compatible
at 37 degree celcius	Compatible
by Indirect Coombs Test	Compatible
Nature of Component	Plateletpheresis

Note : Donor blood screening tests are carried out by ICT method.
The blood/component is ready for supply / supplied for transfusion.
NB : Please check the labels on the blood unit, requisition form and money receipt properly before starting transfusion.
Instructions for use of Blood Products:
1. Please do not add any medication to the unit of Blood/Component/Products.
2. Use only standard Blood administration set , filter for transfusion of Blood/Component/Products
3. Check the unit of Blood/Blood products for color, clot formation, if anything abnormal, contact with the Blood Bank.
4. If not required or any delay of transfusion please return the blood unit (Whole Blood/RCC) within 30 min of issue from Blood Bank with reason, name & signature of the concerned physician.
5. Platelet and plasma products (Thawed) collected from outside, please transfuse them as soon as possible to get optimum benefit. Thawed plasma must never been refrozen again. Platelet storage require special incubator with temperature 20-24 degree Celsius.

HEMATOLOGY REPORT

Report No: 2689283

PERIPHERAL BLOOD FILM STUDY:

RBC : Anisocytosis with Anisochromia with reduced red cell mass and occasional nRBCs

WBC : Increased total count with gross left shift and majority of them are large mononuclear cells having high N/C ratio & bluish cytoplasm morphologically resembling myeloid blasts.

Platelets : Markedly reduced.

Comment : Suggestive of Acute Myeloid Leukemia(AML)

Advice : Bone marrow study with Immunophenotyping and Cytogenetic study.
